Professional Summary

Cybersecurity student at Deakin University with 620+ days of active TryHackMe training (Top 1% globally). Practical experience across DFIR, SOC alert triage, and log analysis in Windows and Linux environments, with hands-on labs mapped to MITRE ATT&CK. Builds and documents security tooling from forensic investigations to AI-assisted threat detection with a focus on turning raw alerts, logs, and forensic evidence into structured, actionable investigations.

Technical Skills

<i>DFIR</i>	Autopsy · FTK Imager · Volatility · Foremost · Sleuth Kit
<i>Network Analysis</i>	Wireshark · tshark · Nmap · PCAP analysis · tcpdump
<i>SIEM / SOC</i>	ELK Stack · Wazuh · Splunk · Windows Event Logs · Sysmon · MITRE ATT&CK
<i>Scripting</i>	Python · Bash · PowerShell
<i>Platforms</i>	Kali Linux · Ubuntu · Windows · VirtualBox · Docker
<i>Reporting</i>	Structured investigation reports · Evidence integrity (MD5/SHA-256)

Projects

LLM Prompt Injection Detection Platform

Python · FastAPI · Docker · Ollama (Llama 3.2) · scikit-learn · SQLite

- Built end-to-end ML pipeline to detect adversarial prompt injection across 6 attack categories
- Achieved 79.4% classifier accuracy using hybrid rule engine + TF-IDF/Logistic Regression
- Mapped detections to MITRE ATLAS framework; integrated Ollama for live LLM-assisted triage
- Delivered SOC-style dashboard (FastAPI + SQLite) with alert logging and investigation workflow

USB Forensics Case Study

Autopsy · Foremost · MD5/SHA-256 · FTK Imager

- Investigated USB drive in simulated computer fraud case; recovered deleted files and artefacts
- Verified evidence integrity using MD5 and SHA-256 hashing throughout chain of custody
- Produced structured forensic report documenting methodology, findings, and recommendations

SOC Phishing Analysis Lab

Python · Hotmail honeypot · FOSS IOC tools · Ubuntu VM

- Built personal phishing honeypot lab to capture and analyse real-world phishing samples
- Developed Python IOC report generator with auto-incrementing case IDs and auto-defanging
- Documented investigation workflows aligned with real SOC triage procedures

Network Forensics Investigation

Wireshark · tshark · PCAP analysis

- Analysed multiple PCAP captures to identify C2 beaconing patterns and lateral movement
- Applied protocol filtering and packet inspection to surface anomalous traffic behaviour
- Documented findings with recommended remediation actions in structured report

SOC Alert Triage Labs — TryHackMe

ELK Stack · Wazuh · Windows Event Logs · Sysmon

- Investigated simulated SOC alerts across 620+ days of active platform training (Top 1%)

- Analysed Windows Event Logs and Sysmon telemetry; mapped activity to MITRE ATT&CK
- Completed SOC Level 1 path covering threat intelligence, log analysis, and incident response

Experience

Social Media Designer & CTF Mentor

Deakin University Cybersecurity Association

2024 – 2025

Melbourne, AU

- Provided technical mentorship during CTF events, guiding participants through web exploitation and forensics challenges
- Created educational content promoting cybersecurity awareness within the student community

Hospitality Manager

Cafe Savvy

2019 – 2026

Melbourne, AU

- Managed high-pressure incident triage and rapid decision-making in time-critical environments
- Documented operational procedures and ensured compliance across team workflows
- Led and trained teams of up to 10 staff, strengthening communication and accountability

Education

Bachelor of Cyber Security

Deakin University

2023 – Present

Melbourne, AU

- Focus areas: Digital Forensics & Incident Response, Network Security, AI Security
- WAM: 79.28 — Distinction Average

Certifications & Training

- **TryHackMe SOC Level 1 Path** — Top 1% globally · 620+ days active · Streak maintained
- **TryHackMe** — Completed modules: Incident Response, Digital Forensics, Network Analysis, Threat Intelligence
- **In Progress:** CompTIA Security+

Research Interests

DFIR & forensic tooling

SOC automation & detection engineering

AI / LLM security research
